```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cc bind to the human erbb2 gene product Erbb2 (also known as HER2): Peptides crepresented in AAB76350 - AAB76420 and AAB76432 - AAB76509 are examples co f the ErbB2 binding ligands of the invention. Sequences used in the isolation of the peptides of the invention. The peptides compete for binding ErbB2 with naturally occurring ligands, and may be used to treat disorders characterized by over expression of HER2/ErbB2 such as cancers, diseases of the nervous system, musculature and epithelia, e.g. mervous system damage resulting from trauma, surgery, strokes, ischaemia, infection, metabolic disorders, nutritional deficiency or toxic agents. In particular the synthetic peptide ligands may be used to treat C Alzheimer's disease, Parkinson's disease, epilepsy, multiple sclerosis, thuntington's chorea, Down's syndrome, nerve deafness, Meniere's disease and neuropathy associated with diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    the isolation of the peptides of the invention. The peptides compete for binding ErbB2 with naturally occurring ligands, and may be used to treat disorders characterized by over expression of HER2/ErbB2 such as cancers, diseases of the nervous system, musculature and epithelia, e.g. nervous system damage resulting from trauma, surgery, strokes, ischaemia, infection, metabolic disorders, nutritional deficiency or toxic agents. In particular the synthetic peptide ligands may be used to treat Alzheimer's disease, Parkinson's disease, epilepsy, multiple sclerosis, Huntington's chorea, Down's syndrome, nerve deafness, Meniere's disease and neuropathy associated with diabetes.
                                      The present invention relates to a fusion protein, comprising a peptide ligand and an immunoglobulin (Ig) constant region multimerization domain (Ib). The hybrid molecules comprising the peptide ligands and their functional derivatives can be used in the same applications as, a peptide ligand can be used. For example the peptide ligand can bind ErbB2. The peptide ligand may bind to and inhibit the activity associated with a particul
                                                                                                                                                                                  Novel fusion polypeptides comprising a functions to target hybrid molecule to constant region multimerization domain
                                                                                                                                                                                                                                             WPI; 2001-123106/13.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      HER2 peptide ligand #4

The hybrid molecules comprising the peptide ligands and their functional derivatives can be used in the same applications as, a peptide ligand can be used. For example the peptide ligand can bind ExbB2. The peptide ligand may bind to and inhibit the activity associated with a particular
                                                                                                                                                                                                      Human; erbB2; HER2; cancer; nervous system disease; stroke; ischaemia; metabolic disorder; nutritional deficiency; Alzheimer's disease; Parkinson's disease; epilepsy; multiple sclerosis; Huntington's chorea;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel fusion polypeptides comprising a peptide ligand domain which functions to target hybrid molecule to target cell, and immunoglobulin constant region multimerization domain .
                                                                                                                                                                      Synthetic.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC This invention relates to non-naturally occurring peptide ligands which CC bind to the human erbb2 gene product ErbB2 (also known as HER2). Peptides CC represented in AAB76350 - AAB76421 and AAB76432 - AAB764509 are examples CC of the ErbB2 binding ligands of the invention. Sequences used in CC the isolation of the peptides of the invention. The peptides compete for CC binding ErbB2 with naturally occurring ligands, and may be used to treat CC disorders characterized by over expression of HER2/ErbB2 such as cancers, CC diseases of the nervous system, musculature and epithelia, e.g. nervous CC system damage resulting from trauma, surgery, strokes, ischaemia, CC infection, metabolic disorders, nutritional deficiency or toxic agents. CC infection, metabolic disorders, nutritional deficiency or toxic agents. CC infection data the synthetic peptide ligands may be used to treat CC In particular the synthetic peptide ligands may be used to treat CC lifemer's disease, Parkinson's disease, epilepsy, multiple sclerosis, CC Huntington's Chorea, Down's syndrome, nerve deafness, Meniere's disease conductors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SSSSS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Best
                                                                                                                                     This invention relates to non-naturally occurring peptide ligands which bind to the human erbB2 gene product ErbB2 (also known as HER2). Peptides represented in AAB76350 - AAB76420 and AAB76432 - AAB76509 are examples of the ErbB2 binding ligands of the invention. Sequences used in AAB76421 - AAB76431 represent antibody Fc amino acid sequences used in the isolation of the peptides of the invention. The peptides compete for binding ErbB2 with naturally occurring ligands, and may be used to treat disorders characterized by over expression of HEB2/ErbB2 such as cancers,
                                           In particular the synthetic peptide ligands may be used to treat Alzheimer's disease, Parkinson's disease, epilepsy, multiple sclerosis, Huntington's chorea, Down's syndrome, nerve deafness, Meniere's disease
                                                                                       diseases of the nervous system, musculature and epithelia, e.g. system damage resulting from trauma, surgery, strokes, ischaemia infection, metabolic disorders, nutritional deficiency or toxic
                                                                                                                                                                                                                                                                                                                       Non-naturally occurring peptide ligands which compete for binding erB2 gene products, useful for treating e.g. Alzheimer's disease, multiple sclerosis and diabetic neuropathy -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Best Local Similarity 77.8 Matches 14; Conservative
                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention relates to non-naturally occurring peptide ligands which bind to the human erbB2 gene product ErbB2 (also known as HER2). Peptides represented in AAB76350 - AAB76420 and AAB76432 - AAB76509 are examples of the ErbB2 binding ligands of the invention. Sequences used in AAB76421 - AAB76631 represent antibody Fc amino acid sequences used in the isolation of the peptides of the invention. The peptides compete for binding ErbB2 with naturally occurring ligands, and may be used to treat disorders characterized by over expression of HER2/ErbB2 such as cancers,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; erbB2; HER2; cancer; nervous system disease; stroke; ischaemia; metabolic disorder; nutritional deficiency; Alzheimer's disease; Parkinson's disease; epilepsy; multiple sclerosis; Huntington's chorea; Down's syndrome; nerve deafness; Meniere's disease; diabetic neuropathy.
                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                   In particular the synthetic peptide ligands may be used to treat Alzheimer's disease, Parkinson's disease, epilepsy, multiple sclerosis, Huntington's chorea, Down's syndrome, nerve deafness, Meniere's disease and neuropathy associated with diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                             diseases of the nervous system, musculature and epithelia, e.g. nervous system damage resulting from trauma, surgery, strokes, ischaemia, infection, metabolic disorders, nutritional deficiency or toxic agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Disclosure; Figure 16; 116pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Non-naturally occurring peptide ligands which compete for binding erB2 gene products, useful for treating e.g. Alzheimer's disease, multiple sclerosis and diabetic neuropathy -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WPI; 2001-123048/13

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This invention relates to non-naturally occurring peptide ligands which bind to the human erbBZ gene product ErbBZ (also known as HER2). Peptides represented in AAB76350 - AAB76420 aAB76432 - AAB76509 are examples of the ErbBZ binding ligands of the invention. Sequences aAB76421 - AAB76431 represent antibody Fc amino acid sequences used in the isolation of the peptides of the invention. The peptides compete for binding ErbBZ with naturally occurring ligands, and may be used to treat disorders characterized by over expression of HERZ/ErbBZ such as cancers, diseases of the nervous system, musculature and epithelia, e.g. nervous system damage resulting from trauma, surgery, strokes, ischaemia, infection, metabolic disorders, nutritional deficiency or toxic agents. In particular the synthetic peptide ligands may be used to treat Alzheimer's disease, Parkinson's disease, epilepsy, multiple sclerosis, and the process of the parkinson's disease, parkinson's disease, parkinson's disease, parkinson's disease, and parkinson's disease, parkinson's diseas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Non-naturally occurring peptide ligands which compete for binding human erB2 gene products, useful for treating e.g. Alzheimer's disease, multiple sclerosis and diabetic neuropathy -

                                                                                                                                                                                                                                                                                                                                                                                                                                                    of the ErbB2 binding ligands of the invention. Sequences and AB76421 - AB76431 represent antibody Fc amino acid sequences used in the isolation of the peptides of the invention. The peptides compete for binding ErbB2 with naturally occurring ligands, and may be used to treat disorders characterized by over expression of HER2/ErbB2 such as cancers, diseases of the nervous system, musculature and epithelia, e.g. nervous system damage resulting from trauma, surgery, strokes, ischaemia, infection, metabolic disorders, nutritional deficiency or toxic agents. In particular the synthetic peptide ligands may be used to treat Alzheimer's disease, Parkinson's disease, epilepsy, multiple sclerosis, Huntington's chorea, Down's syndrome, nerve deafness, Meniere's disease and neuropathy associated with diabetes.
Synthetic
                         metabolic disorder; nutritional deficiency; Alzheimer's disease; Parkinson's disease; epilepsy; multiple sclerosis; Huntington's chorea; Down's syndrome; nerve deafness; Meniere's disease; diabetic neuropathy
                                                                                                       ErbB2 binding peptide amino
                                                                                                                                                                                                    AAB76373 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence

Peptides CC represented in AAB76350 - AAB76420 and AAB76432 - AAB76509 are examples CC of the ErbB2 binding ligands of the invention. Sequences CC AB76421 - AAB76431 represent antibody Fc amino acid sequences used in CC the isolation of the peptides of the invention. The peptides compete for CC binding ErbB2 with naturally occurring ligands, and may be used to treat CC disorders characterized by over expression of HER2/ErbB2 such as cancers, CC diseases of the nervous system, musculature and epithella, e.g. nervous cystem damage resulting from trauma, surgery, strokes, ischaemia, CC infection, metabolic disorders, nutritional deficiency or toxic agents. CC Infection, metabolic disorders, nutritional deficiency or toxic agents. CC Infection, disease, Parkinson's disease, epitide ligands may be used to treat CC Alzheimer's disease, Parkinson's disease, multiple sclerosis, CC Huntington's chorea, Down's syndrome, nerve deafness, Meniere's disease can decrease and neuropathy associated with diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Best Loc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC This invention relates to non-naturally occurring peptide ligands which CC bind to the human exbB2 gene product ExbB2 (also known as HER2). Peptides CC represented in AAB76350 - AAB76420 and AAB76432 - AAB76509 are examples CC of the ExbB2 binding ligands of the invention. Sequences (CC AAB76421 - AAB76431 represent antibody Fc amino acid sequences used in CC the isolation of the peptides of the invention. The peptides compete for CC binding ExbB2 with naturally occurring ligands, and may be used to treat CC diseases of the nervous system musculature and epithelia, e.g. nervous considered the nervous system musculature and epithelia, e.g. nervous system damage resulting from trauma, surgery, strokes, ischaemia, CC infection, metabolic disorders, nutritional deficiency or toxic agents. CC infection, disease, Parkinson's disease, epilepsy, multiple sclerosis, CC Alzheimer's disease, Parkinson's disease, epilepsy, multiple sclerosis, CC Huntington's chorea, Down's syndrome, nerve deafness, Meniere's disease can dearn europathy associated with diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

This invention relates to non-naturally occurring peptide ligands which CC bind to the human erbB2 gene product ErbB2 (also known as HER2). Peptides crepresented in AAB76350 - AAB76420 and AAB76422 - AAB76509 are examples CC of the ErbB2 binding ligands of the invention. Sequences used in CC the isolation of the peptides of the invention. The peptides compete for CC binding ErbB2 with naturally occurring ligands, and may be used to treat CC disorders characterized by over expression of HER2/ErbB2 such as cancers, CC diseases of the nervous system, musculature and epithelia, e.g. nervous system damage resulting from trauma, surgery, strokes, ischaemia, CC infection, metabolic disorders, nutritional deficiency or toxic agents. CC infection, metabolic disorders, nutritional deficiency or toxic agents. CC In particular the synthetic peptide ligands may be used to treat CA lzheimer's disease, Parkinson's disease, pultiple sclerosis, CC Huntington's chorea, Down's syndrome, nerve deafness, Meniere's disease can not the contract of the contract 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             erB2 gene products, useful for treating e.g. multiple sclerosis and diabetic neuropathy - \,

Non-naturally occurring peptide ligands which compete for binding erB2 gene products, useful for treating e.g. Alzheimer's disease, multiple sclerosis and diabetic neuropathy -

Disclosure; Figure 16; 116pp; English.

This invention relates to non-naturally occurring peptide ligands which bind to the human erbB2 gene product ErbB2 (also known as HER2). Peptide represented in AAB76350 - AAB76420 and AAB76432 - AAB76509 are examples

                                                                                                                                                                                                                                                                                                                                                                                of the ErbB2 binding ligands of the invention. Sequences and AAB76421 - AAB76431 represent antibody Fc amino acid sequences used in the isolation of the peptides of the invention. The peptides compete for binding ErbB2 with naturally occurring ligands, and may be used to treat disorders characterized by over expression of HERZ/ErbB2 such as cancers, diseases of the nervous system, musculature and epithelia, e.g. nervous system damage resulting from trauma, surgery, strokes, ischaemia, infection, metabolic disorders, nutritional deficiency or toxic agents. In particular the synthetic peptide ligands may be used to treat Alzheimer's disease, Parkinson's disease, pellepsy, multiple sclerosis, Huntington's chorea, Down's syndrome, nerve deafness, Meniere's disease and neuropathy associated with diabetes.
